

**A Matching design**

Illustrative observations  $\rightarrow$  interpolate  $\tau$   
 Mean within PDB  $\rightarrow$  equal-PDB mean  $\rightarrow$  contrast

**B Protein versus matched peptide****C Magnitude of the gap****D  $\alpha$  robustness****E PPII robustness****F Matching changes the prediction**

Conditional PDB bootstrap intervals; post hoc sensitivities. Primary and  $\pm 5^\circ$  are the same analysis, plotted once.
